

Never wonder again if your feed has been delivered

My Feed Watch is a reliable, flexible feed delivery confirmation tool within Feed Allocation System.

IF YOUR ANIMALS DON'T EAT, THEY DON'T GROW.

Reduce costly feed outages when you verify that the right feed is being delivered to the right bin at the right time.

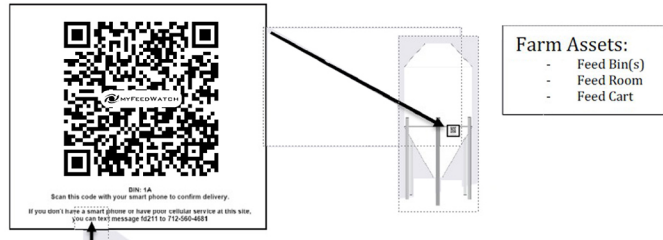

- Get real time verification of feed deliveries.
- Get delivery verification anywhere, any time from any mobile device.
- Manage your bin assets & easily communicate naming hierarchy.
- Ensure feed delivery drivers select the correct bin with easy-to-implement QR codes.
- Correct your bin inventory by communicating feed overages.

HOW IT WORKS

STEP ONE

Farm labels each farm asset where feed can be delivered with a QR code.

Farm Assets:
- Feed Bin(s)
- Feed Room
- Feed Cart

STEP TWO

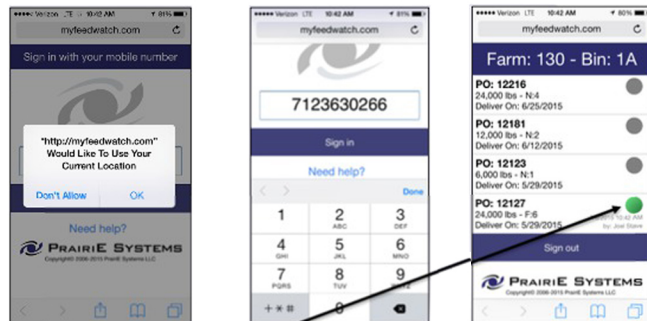

Delivery driver scans the QR code at time of delivery.

Works with any standard smart phone with a camera. No special hardware is needed.

STEP THREE

Drivers will be prompted to allow access to their location & mobile number.

A list of unconfirmed deliveries for that location will appear for the driver to select from.

STEP FOUR

The delivery is now confirmed. IT'S THAT SIMPLE!

Delivery driver can text the feed asset's unique code to the number provided.
